Past Research at UCSF/SFGH:

Co-investigator of a project at SFGH comparing the effect of intensive case management for patients hospitalized at SFGH who are HIV infected and are substance abusers, with histories of failed substance abuse treatment, versus “usual care,” consisting of substance abuse and mental health evaluations and referrals to outside services for the same types of patients. My role was as Medical Director of the Substance Abuse Consultation Service at SFGH, with direct supervision of the Case Management Team providing the intensive case management, seeing and evaluating the patients when needed, and helping to facilitate the ongoing treatment, research evaluations (investigators are “blind” as to whether a patient is receiving case management or usual care.)
